We claim:

1	1. A customizable application system comprising:
2	an internet application system configured to support an internet application, the interne
3	application associated with metadata configured for generating an a plurality of
4	application user interfaces each having customizable interaction model, the
5	internet application system including,
6	a) an application server configured to generate the application user
는 2	interface, and
₽7 □8 ₽9 ₽9	b) a web application server configured to deliver the application user
1 9	interface to a client;
	a personalization system including a personalization engine and a user profile interface
11 12 13	the personalization interface configured to modify personalization data
12	characterizing the interaction model such that the interaction model in more tha
1 3	one of the plurality of application user interfaces is modified; and
14	a data repository including a data record for storing the personalization data, the data
15	record being accessible using the metadata.

1	2. A method of developing a customizable application user interface associated with an
2	internet application, the method comprising the steps of:
3	selecting a customizable interaction model associated with a data record, the data record
4	being stored in a data repository and being user modifiable, the data repository
5	being physically remote from a client used to display the application user
6	interface;
7	including the interaction model in the application user interface;
8	generating metadata associated with the interaction model, the metadata including a
⊭ 9	reference to the data record; and
<u> </u>	storing the metadata in association with the internet application, the internet application being
1	configured for access using the application user interface.
	3. A method of customizing an application user interface, the method comprising the steps of:
2	accessing a page definition, the page definition including metadata associated with a
<u>∏</u> 3	customized property of a interaction model;
4	accessing the metadata to obtain a reference to a data record;
5	using the reference to access the data record, the data record being stored in a data
6	repository and being user modifiable, the data repository being physically remote
7	from a client used to display an application user interface;
8	reading information from the data record;
9	using the information read to determine a value defining the customized property;
10	generating markup-language responsive to the determined value; and
11	including the generated markup-language in the application user interface.
